Senior Data Scientist • 10+ years of experience • Causal Experimentation • Applied ML • GenAI Innovation

Skills

- **Experimentation & Causal Inference:** A/B Testing, Switchback Experiments, Synthetic Controls, Power Analysis
- **Core Languages & Systems:** Python, SQL, Golang, SAS, Shell Scripting, BigQuery, Hive, Hadoop MapReduce
- **Machine Learning & Frameworks:** Deep Learning, ANN, Scikit-Learn, PyTorch, TensorFlow, XGBoost, Clustering
- **Data Engineering & MLOps:** Google Cloud Platform (GCP), Airflow, dbt, Docker, CI/CD, Data Modeling, Git
- **GenAI & Developer Productivity:** Agentic Workflows, AI Coding Tools (Claude Code, Cursor)
- **Business Intelligence & Visualization:** Google Looker Studio, Tableau, Streamlit

Work Experience

Overview

Senior Scientist, Uber | May 2025 - Present

↳ Data Science Manager, Gojek | May 2021 - April 2025

↳ Senior Analytics Manager, American Express | April 2016 - April 2021

↳ Software Engineer II at Hewlett Packard | July 2011 - April 2012

Senior Scientist, Uber - Amsterdam | May 2025 – Present

Main Science PoC for Driver Subscriptions globally. Steered the entire data science roadmap for a team of 4 DS focusing on rigours experimentation and rapid expansion of subscriptions across more than 15 countries.

- **Experimentation:** Led the experimentation and launch strategy for driver subscription, which drove a +15% Supply Hours (SH) increase, mitigating a "Code Red" supply crisis in India resulting in a +2.6% global SH increase
- **Scaling Product:** Spearheaded the end-to-end science work to scale driver subscriptions to several LATAM markets using Synthetic Control design; driving a +10% uplift in gross billings through supply and reliability improvements
- **Pricing:** Built a pricing simulation tool that slashed operational iteration cycles from weeks to hours. It included an analytical framework to maximize launch adoption without cannibalizing existing revenue channels
- **AI Tooling for DS:** Improved organization-wide data science productivity by using AI agents:
 - Used Claude Code to create robust tooling for synthetic control city selection, power analysis and XP analysis, which reduced time for running synthetic control experiments from several weeks to minutes
 - Co-developed agents (XPP Writer and XPP Reviewer) to accelerate and standardize experimentation plans.
 - Pro-actively hosted workshops for Claude Code, Cursor and Open Code to scale team's technical capabilities
- **Data-Driven Product Strategy:** Designed funnel and user-rationality analyses; discovered that 20% of users failed to see the selection page and >90% of purchases relied on Auto-Renewal. These insights reshaped the product roadmap, prioritizing Pass Discoverability and establishing auto-renewals as the core subscription mechanism.
- **Data Foundations:** Created foundational subscription data model (metric definitions, fact and dim tables) to improve data quality and standardize querying. Identified a global revenue tracking gap and collaborated with finance team to design a system-level "subs revenue allocation" methodology for accurate reporting.
- **Leadership & Citizenship:** Managed and mentored junior data scientists across tipping and subscription charters. Conducted dozens of global data science interviews, peer-reviewed several experimentation plans, and founded the bi-weekly Amsterdam Earner Science Jam sessions for informal knowledge sharing.

Data Science Manager, Gojek - India | May 2021 - April 2025
Roles: Data Science Manager ← Data Scientist L5 ← Data Scientist L4 ← Data Analyst L4

Led machine learning, pricing, and experimentation initiatives across Ads, Pricing, and Marketplace Supply teams, driving revenue growth, operational efficiency, and platform reliability for Gojek’s marketplace businesses.

- Led ML pricing strategy for the Singapore market, delivering ~\$50K monthly gross take uplift through introduction of a new optimization objective balancing growth and marketplace efficiency.
- Led design and development of next-generation driver positioning system, improving recommendation quality by 15–30% while significantly reducing operational maintenance overhead.
- Built and operationalized an end-to-end MLOps platform covering ETL, feature engineering, automated training, deployment, and monitoring, enabling scalable and reliable model lifecycle management.
- Built order pooling optimization module in Go, improving fleet utilization and reducing delivery costs.
- Designed experimentation frameworks and executed randomized A/B and switchback experiments to evaluate major product launches and marketplace interventions.
- Established monitoring and alerting systems for production ML models using BigQuery, Data Studio, and Airflow, proactively identifying critical production issues.
- Reduced ad-hoc analytics bandwidth by 66% through process standardization, pipeline optimization, and dashboard redesign.
- Served as Data Science representative in the Technology Architecture group, influencing engineering best practices and authoring/reviewing 6 architecture decision records (ADRs/RFCs).

Senior Analytics Manager, American Express - India | April 2016 - April 2021
Roles: Senior Manager ← Manager ← Assistant Manager ← Analyst

Led advanced analytics and machine learning initiatives supporting global Merchant Marketing and Services organizations, delivering predictive modeling, strategic consulting, and innovation platforms used for large-scale marketing and operational decision-making.

- Managed and mentored a team of 4 data scientists and analysts, owning hiring, project prioritization, stakeholder engagement, and performance management across multiple annual review cycles.
- Developed a portfolio of 15+ machine learning models (XGBoost, GBM, kNN, sequence mining, collaborative filtering) supporting customer acquisition, marketing targeting, and merchant risk detection.
- Built and deployed Merchant Anomaly Prediction system detecting terminal disruption, suppression, and surcharge risks across multiple geographies, significantly reducing merchant servicing costs.
- Designed algorithm to identify customers’ travel dates and destinations using DBSCAN and Hadoop Map-Reduce
- Awarded the American Express GCSG President’s Award (top 2–3% globally) along with multiple innovation and partnership recognitions.

Software Engineer II, Hewlett Packard - India | July 2011 - April 2012

- Designed and implemented highly scalable test framework which reduced defects and improved test efficiency
- Received HP eAward for outstanding effort and Improvement Award for design of scalable test framework

Education

CFA Program	Passed all three levels of CFA Program		Aug 2018
MBA	Indian Institute of Management Indore	3.62/4.33	Apr 2016
B.Tech (ECE)	Indian Institute of Technology, Guwahati	8.84/10	May 2011
